Working with the Member Wizard Web Template

The Member Wizard Web template is designed to give organisations a clean, good looking website with all the functionality they need to manage their requirements while at the same time being simple enough so someone without web programming knowledge can easily design and maintain it.

In order to manage your website, your Member Wizard **User** name must have been given **Full Web Site access** for the **Role** attached to your **User** login. Having said that you do not need to have a Member Wizard subscription. Member Wizard provides free accounts if there are less than 30 members in your database so if you only want to use the website component of Member Wizard you can do so easily and inexpensively.

How to obtain a Member Wizard website template URL

If you would like to try designing your own site and do not have a current **Member Wizard** account with us click the **Free Trial** button on our website and provide your preferred login name and the name of your organisation. You will be sent a link with a temporary password. Once you have logged into Member Wizard and as the first login account you will have **Administrator** rights to your account which includes full web access rights.

Click on the **Website** menu item and check the box which says Yes I would like to transfer our website to the Member Wizard website. Don't worry this will not cause anything to change in your current web arrangements - it just allows you to send us a request. We will then forward you a temporary URL you can use to access your new website and design it to suit yourself.

When you are happy with the design you then need to contact us and we will start the process of making the website publicly available. This may entail either transferring your current web domain to the new site or inserting a redirection on your current web domain to send people to the new site.

How much does the Web Template cost?

When your website is first published there is an initial set up and hosting charge for the first year of \$450 plus GST charged. Subsequent years the charge is only \$150 plus GST.

Included in this charge are 3 Zoom training sessions with our web support member which can be booked from our home page on the Book a Zoom link at the top of the page. If you require more than 3 sessions they will be charged at \$50 per hour plus GST.

Also included in this charge is the cost of hosting your website and also your domain. We will also include the cost of obtaining a domain for you if you do not already have one.

Please note that our web hosting provider can not provide domain hosting for .org.au domains and we can not provide domain hosting for you if you use your domain for sending emails.

In cases such as this we will provide you with some changes to be made to your existing domain hosting record's DNS which will redirect the domain to the new site.

How do I access my web template?

Firstly you need to advise us that you wish us to provide a web template associated with your Member Wizard database.

You do this by logging into your Member Wizard account, clicking the Website menu item and checking the box marked **Yes I would like to transfer our website to the Member Wizard website.**

This will send us a message and we will advise you when your template is ready.

To access your template you simply return to your Member Wizard database, click on the **Website** menu item and click the Website Template link which will have replaced the previous application form.

How to get started designing your website

You log into the Website template using your Member Wizard login and password at the **Login** link in the top website menu. If you receive a message saying you are not authorised to edit the site it will be because your Member Wizard login has not been granted **Full Website Access** rights. In this case you need to contact your Member Wizard **Administrator** (the person who first created your Member Wizard account or whoever has **Administrator** access to your Member Wizard database).

You will notice that once you are logged in the text on the button will change from **Login** to **Settings**.

A Brief Note about Styles in the Website Template

When applying styles such as bold, italics, font size or colour there appears to be an "order of operations" you must adhere to in order for all the styling components to show up correctly when rendered to HTML on the website. Below is the correct order:

1. Type the text first
2. Highlight the text
3. Apply the styles all in the single highlighted area at the same time in this order
 - a. Colour
 - b. Size
 - c. Bold/Italics

It appears that the tags which surround bold and italics text will not allow the instructions to make the text a certain size or colour to penetrate the tags once they are in place so colour and size must be applied first.

Once logged in you will see that various areas of the web page have either a green, purple or red line around them with an edit pen in the top right corner.

The outer green border defines the element the **Page**. The purple border defines a **Section**, and the red border defines a **Panel**.

The three elements are described in more detail in the following sections.

Working with the Page menu

Website Settings

By clicking the green edit pen you will see the **Page menu**

Page Settings

(left)

View Page

Manage Pages

Add Section

Website settings:

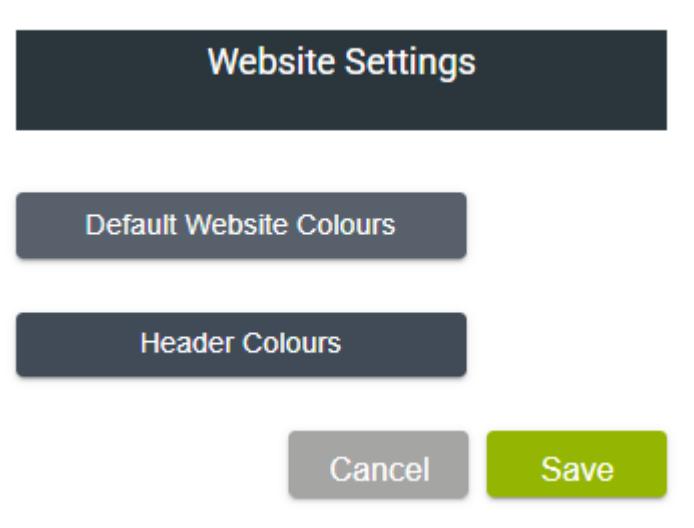

From here you choose the colours both for your website as a whole and for the header and footer of the page.

Using Colour in your website

Colours should be used sparingly. Some colours are not friendly to those with eyesight issues. Work on the principle of defining a small colour palette which consists of a background colour (bearing in mind accessibility issues), a complementary darker shade to use as a Header colour (if desired) and a contrasting colour to be used as emphasis.

The overuse of colour is one of the key indicators that the site is not professionally managed – **Remember when it comes to colour, less is better.**

The Header colours will define a band of colour at the top and bottom of your page into which appears your Logo and the menu. You do not need to colour this if you want to have a page with an all white background but sometimes a header can look quite effective.

Default Website Colours

Heading 1 Colour	Black
Heading 2 Colour	DimGray
Heading 3 Colour	Red
Text Colour	Black
Link/Menu Colour	RoyalBlue
Background Colour	PapayaWhip

Cancel
Save

The Link/Menu colour will set what colour your menu at the top of the page is but it will also carry through to links used within the page of your website so if you have a dark header and decide to use white for the menu links then you will need to define links used within Text boxes within the text box itself by using the Text colour icon otherwise they too will be white and unable to be seen on light coloured pages.

Page Settings

On **Page Settings** you can change the name of the page, or designate a page as a **Hidden** page or a **Menu only** page.

Page Settings

Caption	Home
Route	
Padding Top 10px	Padding Right 10%
Padding Bottom 10px	Padding Left 10%
Gap 5%	
<input type="checkbox"/> Menu Only <input type="checkbox"/> Hidden Page	
Delete Page	

Cancel
Save

The page settings form will allow you to adjust the space surrounding the elements on your page. You should use % measurements for horizontal padding as it will allow your page to adjust easily from large screen down to phone or tablet screens.

Gaps however should be defined in pixels (PX) as these make incremental changes possible.

The Link/Menu colour will set what colour your menu at the top of the page is but it will also carry through to links used within the page of your website so if you have a dark header and decide to use white for the menu

links then you will need to define links used within Text boxes within the text box itself by using the Text colour icon otherwise they too will be white and unable to be seen on light coloured pages.

View page

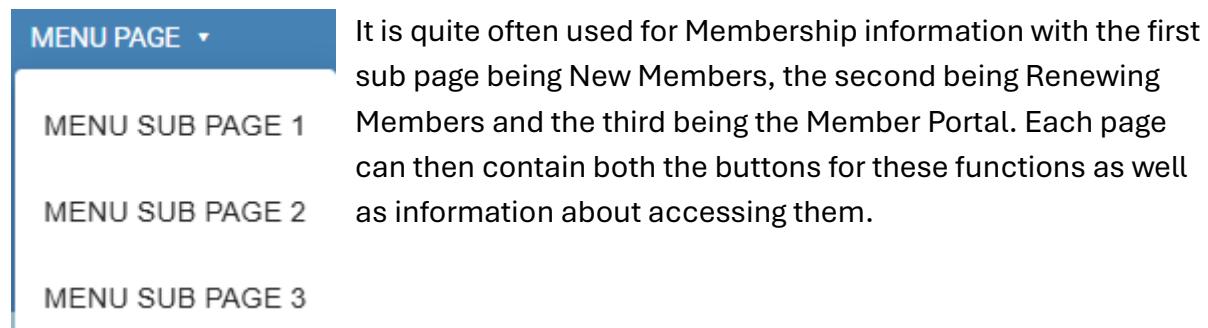

View page is used to access **Hidden pages**. In the image at the bottom of the previous page you will see a tick box called **Hidden page**.

These pages are used usually to hold text which is carried over from an article or other piece of text on a previous page. It is usually accessed by the reader by clicking a link which says something such as “Read more.....”

As the page does not appear in the menu the only way to access it to build and design it is via View page.

Menu only pages

These are pages designed to act as an parent anchor for a subset of child pages such as in the example below. Here we have a Menu only page (called Menu page) with 3 child pages beneath it. There is no actual menu page. It is purely there as an anchor for the other 3 pages beneath it.

MENU PAGE ▾

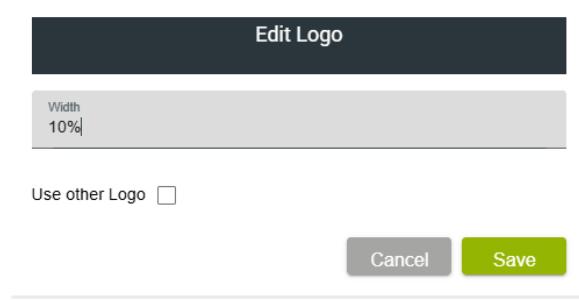

MENU SUB PAGE 1 It is quite often used for Membership information with the first sub page being New Members, the second being Renewing Members and the third being the Member Portal. Each page can then contain both the buttons for these functions as well as information about accessing them.

MENU SUB PAGE 2

MENU SUB PAGE 3

Your Logo

Your logo as it appears in your Member Wizard database will initially appear in the top left corner of your template. Quite often this appears very large because in your database the logo image is reduced to fit into the small space allocated to it however on your website template it is unrestrained.

Edit Logo

Width
10%

Use other Logo

Cancel Save

To reduce the size of the logo click the red edit pen in its top right corner and reduce the size as required. You can also replace the logo with another image if you prefer.

The Name of your organisation

Initially a text box containing XXXXXXXXXX will appear adjacent to your logo. This can be edited to your organisation’s name if you desire but it can also be deleted or reduced to only a small percentage. Doing this will allow your menu to fit further along the top of the page.

Adding a Section

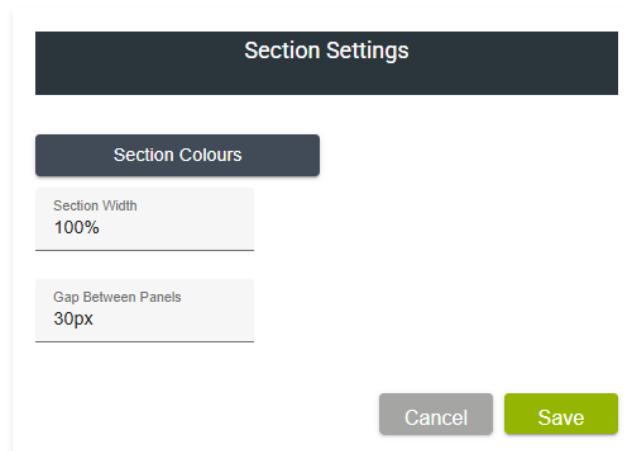

Your page needs to contain at least one section if it is not a menu only page. Sections are designed to hold panels.

Sections are covered in more detail in the next section of this document.

Working with the Section menu

Once you've added a **Section** to your page you can click on the purple edit pen to view the Section menu.

	Section Settings
Section Settings	Here is where you set the details of the section up.
Add Section Before	Sections can run either horizontally or vertically along or down the page depending on your design requirements.
Add Section After	
Add Panel	Horizontal sections can be used to place text next to images.
Move Section Up	
Move Section Down	Vertical sections can be used to place images above text (or visa versa).
Delete Section	

The **Sections Settings** screen allows you define if you want the panels in your section to be horizontally or vertically aligned. If you wish to align vertically designate a width of around 48% to the Section width if you want to have 2 sections side by side. The Gap between panels can

also be adjusted in this menu. You can 2 or 3 sections side by side. In a handheld device this will run one above the other.

You can add the Section either before an existing section or after it and you can also move a section up or down from its current position on the page.

Add Panel

Sections are designed to hold **Panels**. There are a number of different panel types and these are covered in the next section.

Working with Panels

There are several different panel types you can work with. Most panels are width adjustable.

Text Panels

As the name suggests these are for text on your page. If you change the % width in the Text Edit field, you can have other panels next to your text panel but remember the system does require a gap between the panels so two panels each of 50% will not fit side by side. Try making one of them 45%.

You can sit multiple panels side by side across your page provided you remember this buffer around each of them.

You enter text into the panel simply by typing it in to the area provided.

Section settings will dictate whether or not your panels contain a background or text colour.

You can place an image in your text panel and run text around it by clicking the image tool of a rectangle containing a star shape and selecting to run text either around the left or the right of the image. If you wish to include several images in a text box with text you are best off placing them in the cell of a table.

Picture Panels

Images can be uploaded from your device into picture panels.

You can also add a **Caption** which will appear along the bottom of the image.

If at first you don't see your image once you've clicked **Save** remember that it takes time to upload to the server...be patient.

You can set the % width of your picture panel and also the horizontal alignment of the picture within its panel

Google Maps Panels

You can insert a Google map into your panel. Simply type in the address you wish the map to centre around.

You may need to be specific (street number, street, city). If you can't get your address to show on the map go to Google maps in your browser and type in the address there. You may find it is slightly different to what you are entering. Copy the address Google Maps uses and then paste that in your Google Maps panel.

Download Panels

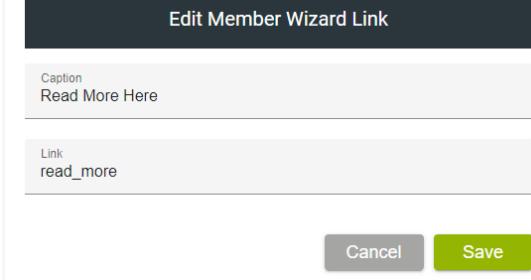

The system is designed so that any document downloads you wish to make available for download need to be stored in the **Documents** folder in your **Member Wizard** database.

When you upload the document to make it available you need to check the box marked **Public** in order to make it able to be selected for download.

Downloads will usually go into your Downloads folder on your device.

Link Panels

These are links which allow you to link one page to another. You firstly create a **Hidden Page** and then copy the **Route** of the **Hidden Page** and use this as the link for the **Link** button. You only should put the actual page name in the **Route** eg if you have created a **Hidden Page** called **Read More** then the **Route** could be “ **read_more**”. Similarly the link button link is simply **read_more**....not the full URL of the page.

This is a link to a page called Contact Us

Title
This link will take you to the Contact Us page of this site

Open link in...
New window

Cancel Save

Here is how the link is constructed. **A word of warning.** **This link will not work until you have copied your Edited page to Live. If you try to use it before then it will simply reload the home page and log you out.** If you check the box marked Open in a New page so that both the existing page plus the new page will be open simultaneously in separate tabs. This may or may not be appropriate for your purpose. The title field provides an alternative to text for those who require accessibility support. The text to display field (as the name suggest) provides the text that forms the link - its what the reader actually sees.

Class Panels

These are only available to organisations who run classes and who have set up the classes in their Member Wizard database.

You do not need to select any file to display the **Classes** for your organisation, the system will automatically detect and load them from your database.

Events Panels

The **Events Panel** will display any active events you have in Member Wizard much as the Class list does for Classes. The Event will disappear when the date for it has passed so you may wish to remove the panel at this time if it is the sole event. Alternatively leave the panel in situ but place a text box message on the page letting interested parties know that any events coming up will be displayed as they are opened for registration.

New Member and Renewing Member Panels

The **New Member** panel will display the **New Member Application Form** as set up in **Settings/New Member Application** in your **Member Wizard** database.

The **Renewing Member** panel will request the member's email address and if this is verified it will send the member a membership renewal invoice to their email address.

Member Portal Panel

In order to use the Member Portal, the organisation must have set up the portal in their Member Wizard Database and the member's membership type must have been included their membership type as one of those permitted access via the Portal.

The Member Portal Panel will allow members to login to their Member Portal with either an email address or member number and a password. They will need to have registered via the website by initially providing either their email address or a member number and selecting a password or PIN.

Facebook Panels

If your organisation has a Facebook page you can include a link to it with a **Facebook**

Edit Facebook Panel

Is Facebook Group <input type="checkbox"/>
Facebook Page URL <input type="text" value="https://www.facebook.com/facebook"/>
Justify <input type="text" value="Centre"/>
Width (px, min 500; do not use %) <input type="text" value="100%"/>
<input type="button" value="Cancel"/> <input type="button" value="Save"/>

Panel. Simply go to your Facebook page and copy the url into the Facebook url field of the Edit Facebook Panel screen. You can obtain your Facebook URL by going to your organisation's Facebook page and copying the url link. If your organisation is registered with Facebook as a group rather than a page you will need to check the box marked **Is Facebook Group**.

Contact Us Panel

A Contact Us panel will retrieve your organisation's address details from Settings/Organisation Details on the Contact page and place them into an emailable message box. You can hide the contact address details by checking the **Hide organisation contact details** box in the Edit screen for that panel if you wish.

If you wish to change the email address of where the message will be sent from the main email address provided in your Member Wizard settings you can do so on the **Settings/Organisation Details/Email** tab in the **Person who receives emails inquiries from website** field.

Once clicked the PDF will open in the browser window. From there it can be printed or saved.

How do I save my edited Website Template?

Once you have your site looking how you wish you should return to the **Settings** menu and click the **Copy Edit Version to Live** button. Should you decide you prefer to restart your website you can click the **Copy Live version to Edit** button.

If you wish to return to a previous version of your website, each change is archived and can be restored by clicking the **Copy Archived Version to Edit** button and selecting the date which represents the website you wish to restore.

Once you have finished click the **Log out to Live Version**.
